

Req. ID	Type	Description	Priority	Acceptance Criteria	Rationale	Comments
FR-001	Functional	The system shall generate weekly meal plans strictly adhering to user macro-nutrient constraints and allergen exclusion lists.	High	Pass: Generated menu contains zero excluded allergen ingredients; Fail: Peanuts included for peanut-allergic profile.	Ensures that generated meal plans are safe and personalized to the user's dietary requirements.	
FR-002	Functional	The system shall let the user provide and update allergies, diabetic limits and calorie goals.	High	Pass: The system saves valid dietary information and displays updated information when the profile is reopened; Fail: Any valid information is missing or stored incorrectly.	Provides dietary information required to generate a personalized meal plan.	
FR-003	Functional	The system shall show the user the status of the scheduled meal deliveries.		Pass: The system displays the current status of each scheduled meal delivery; Fail: A scheduled delivery has no status or displays wrong status.	Allows user to monitor the fulfillment of their meal subscription.	
FR-004	Functional	The system shall let the user start and stop the subscription.		Pass: The selected action updates the subscription status correctly; Fail: The subscription status does not reflect the selected action.	Gives user control over their meal subscription.	
FR-005	Functional	The system shall allow a dietitian to review and modify a generated weekly meal plan before approving it.	High	Pass: The dietitian can review a generated plan, make changes when required, and approve the final plan; Fail: The dietitian cannot review, modify, or approve the generated plan.	Provides professional oversight of clinical dietary recommendations.	
NFR-001	Non Functional	The subscription engine must support schedule modifications (pause, skip, reschedule) up to 12 hours before dispatch.	High	Pass: Benchmarking tests confirm target latency and security standards under simulated peak load.	Provides flexibility for users while allowing sufficient time for delivery preparation.	
NFR-002	Non Functional	The system shall restrict access to user dietary profiles and meal plans to authenticated and authorized users.	High	Pass: An unauthenticated or unauthorized user cannot access another user's dietary profile or meal plan; Fail: Protected dietary information is accessible without authorization.	Protects user dietary information from unauthorized access.
